## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

  (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-7 are rejected under 35 U.S.C. 102(b)/(e) as being anticipated by Ono et al. (JP 2001-202,995 or equivalent US 6,727,023).

The references disclose an ionic liquid crystal monomer comprising at least one polymerizable group. An ionic liquid crystal monomer is a liquid crystal compound having a cation moiety and an anion moiety. An ionic liquid crystal monomer has a so-called mesogen group as a structure, which exhibits liquid crystallinity. The electrolyte comprising a polymer compound obtained by the polymerization of the ionic liquid crystal monomer of the invention can be used as a reaction solvent for chemical reaction or metal plating or can be used for CCD (charge coupled device) camera or various electrochemical cells (so-called cell). The references further teach that the examples of the radical polymerization process include heat polymerization process using a heat polymerization initiator and photopolymerization process using a photopolymerization initiator (see the examples). The electrolyte composition comprises an imidazolium core

Application/Control Number: 10/501,761

Art Unit: 1756

represented by formula (V) and ionic liquid crystal monomer (see Summary of the Invention). Therefore, the references anticipate the claimed invention.

Page 3

3. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Hsiue et al. (US 5,091,274).

The reference discloses an ionic conducting polymer electrolytes, which are prepared from alkali metal salts and side-chain liquid crystalline polysiloxanes containing oligooxyethylene spacers and benzyl ether based mesogenic groups. The polysiloxanes used in the present invention have very low glass transition temperatures, exhibit high mobility of the side chains at the mesophase, which in turn enhance the solubility of the alkali metal salts. As a result, the complexes formed by the polysiloxanes and alkali metal salts exhibit high ionic conductivities. See the reference Example 3 for the preparation of polymer electrolytes from Li metal salt and side-chain liquid crystal polymers (col. 21, line 55 to col. 22, line 51) and the claim. The reference anticipates the claimed invention.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shean C. Wu whose telephone number is 571-272-1393. The examiner can normally be reached on 9:30 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Huff can be reached on 571-272-1385. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <a href="http://pair-direct.uspto.gov">http://pair-direct.uspto.gov</a>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
